Installation Sheet #INS-07035

SprayMaster® Single & Double Radius Fender Brush Pkg. Set Installation Instructions

NOTE:
These instructions for installation are intended to be a general guide to help the installer. Because of the large number of possible mounting configurations, the installer is responsible for the ultimate installation design. Any modifications to the product are the discretion, responsibility and risk of the installer.

Each Brush Package Set Includes
1  Skirting Brush - Enough for One Pair of Single Radius Fenders
16 #8x5/8” Stainless Steel Drilling Pan Head Screws

Step 1
Place the fender in an inverted position on a soft non-marking surface.

Step 2
For single radius fenders take the supplied brush and cut it exactly in half. For double radius fenders you will need to purchase two sets of brushes, one for each side as stated in our literature.

Step 3
Clean the side skirting channel of dirt and grim to allow skirting brush to slide in easier.

Step 4
Place the skirting brush into the channel and secure it into place using the supplied screws. It is recommended that the screws be installed on the inside edge of the brush channel for a better appearance. Start at one end of the fender channel and work along the length of the fender. Placing the screws 1” from each end of the brush and 9” on center along the length of the part. While installing the screws pay close attention to not drive them out through the other side.
